

ApolloMilkSystem

Don't leave it to chance.

GEA Milking & Cooling | WestfaliaSurge

engineering for a better world

GEA Farm Technologies

„Ask your dealer for your individual ApolloMilkSystem service contract!“

ApolloMilkSystem – milking, dipping, flushing, all in one. Save, easy, just perfect!

You want to improve your milk quality! Reduce your labour costs for your milk production! Facilitate and standardise your work process! Use your teat dip with more control! Have you ever felt safer than safe?

Choose the superior four-way milking and select the automated Dipping and BackFlush System in addition. With the new ApolloMilkSystem from GEA Farm Technologies you don't leave it to chance!

The time is right for a groundbreaking dipping and disinfection technology. The ApolloIQ combines all advantages of the IQ milking cluster with an automatic teat care and backflushing of the cluster. This means milking, dipping and flushing with one person in one stroke.

The patented safety valve of the ApolloIQ separates the milk and the media carefully from each other and guarantees that there is nothing mixed, what should not be mixed. This way water, dip and disinfectant will never come in contact with the milk.

The ApolloMilkSystem covers the teats at the best time. Dipping directly in the teat cup is accurate and dipsaving. ApolloIQ automatically always ensures outstanding consistent dipping quality and thus full protection around the teats!

Pure balm for teats and your wallet. Dip into the selection of teat dips with different viscosities. Increase the udder health with great care: this means maximum money for your milk and significantly reduced downtime and costs of treatment.

Lethal removal of germs. After dipping is before milking. Therefore an intensive rinsing process finishes the milking cycle and stops thoroughly all the germs.

ApolloMilkSystem, the epitome of purity, power and strength. Whether a new construction or a retrofit, the ApolloMilkSystem fits well into every stall. Start into a generation of profitable milk production.
